Automatic realization: finite search, confirmed execution plan
Semantic contract
arithmetic, precision, order
Workload
N, batch, shape, placement
Target + core catalog
capacity, compatible cores
Measured services
core, tile, layout, resources
Preparation: build, validate and select
Legal candidates
subgraphs + handoffs
cores, layouts, schedules
Compile + validate
resource / dependency checks
numerical contract
Prioritize + measure
service model, finite budget
complete-plan confirmation
Selected plan / cache
fastest confirmed
matching contract
Measurements
refine candidates
Unsupported / invalid
record explicit gap
Matching cache hit:
dispatch complete plan
Warm device path: adaptation, execution, handoffs and synchronization
Input
Adapt
Resident groups
Handoffs + sync
Output
