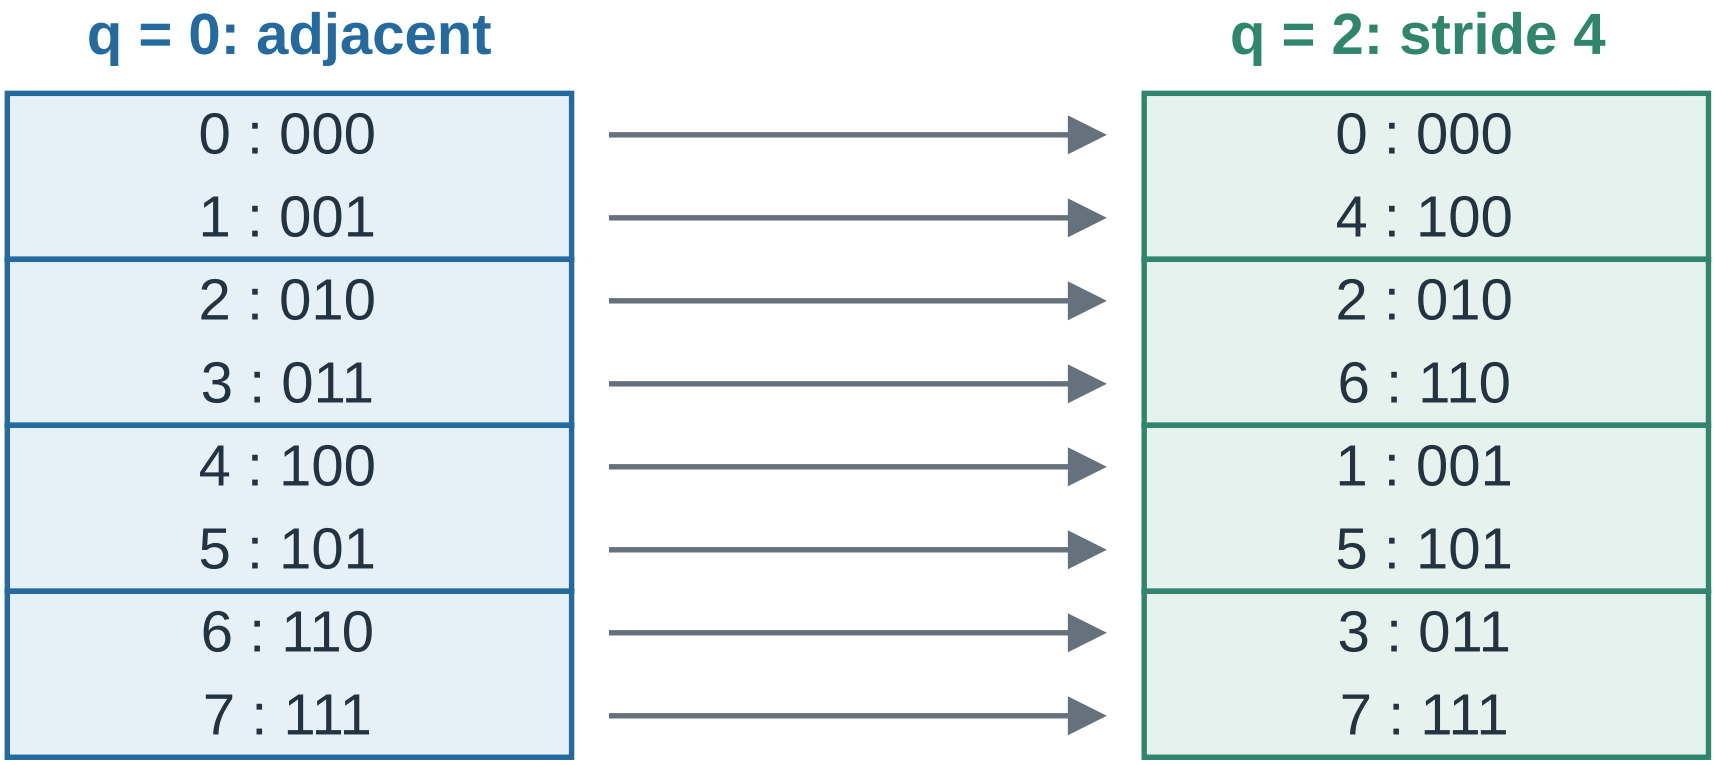
Three-bit index reversal



Stage-bit sequence: (0, 1, 2) -> (2, 1, 0)

Same index domain; axis labels for shape (4, 2)

i = 2r + c: q0 = c0, q1 = r0, q2 = r1

CT local core	**Inverse local GS**
(a + wb, a - wb)	((u+v)/2, (u-v)/(2w))

Local inverse requires invertible w AND 2

Graph relabeling; arithmetic labels remain distinct
