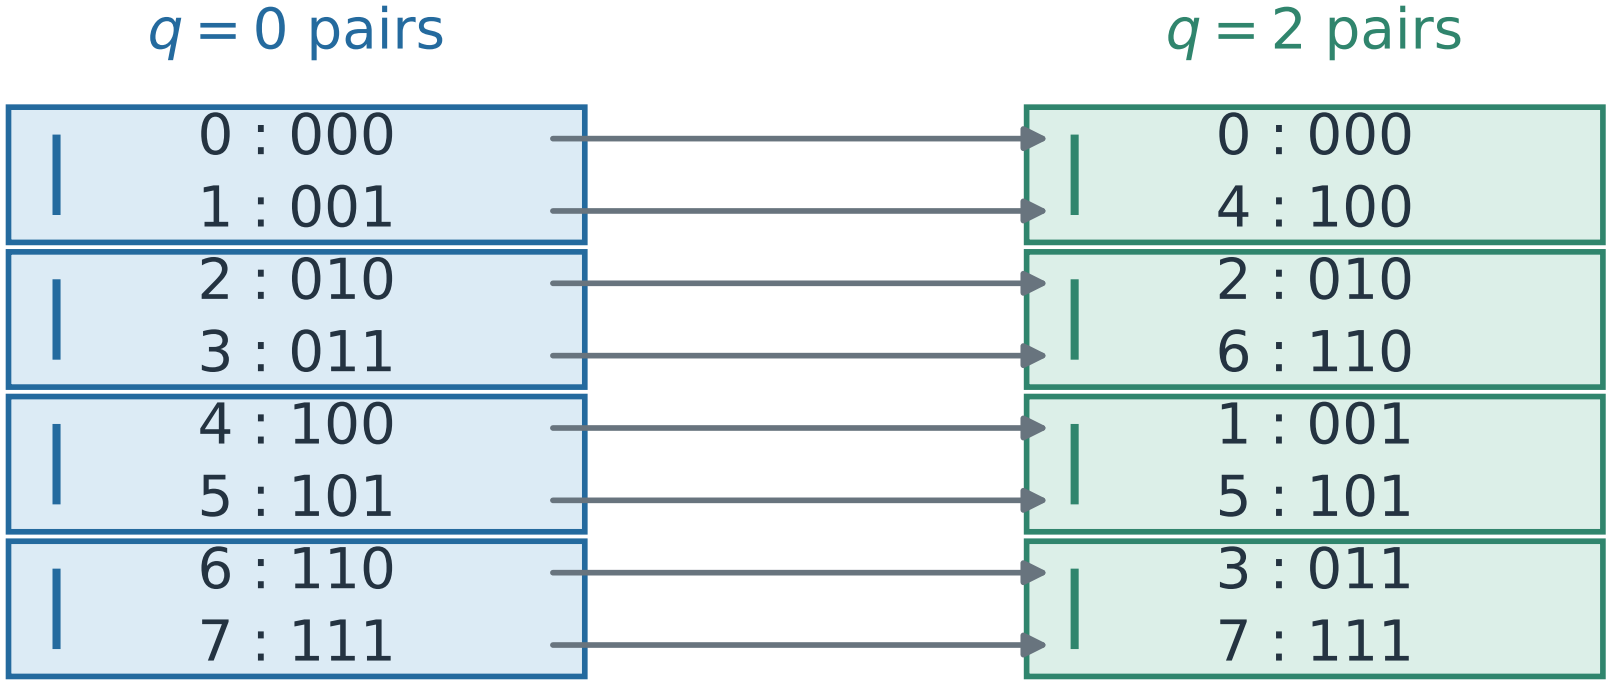
Three-bit index reversal



Stage order: $(0, 1, 2) \mapsto (2, 1, 0)$

Same indices; axis labels for shape (4, 2)

$i = 2r + c$: $\quad q_0 = c_0,\ q_1 = r_0,\ q_2 = r_1$

CT local core

$(a + wb,\ a - wb)$

Inverse local GS

$((u + v)/2,\ (u - v)/(2w))$

Local inverse requires invertible w and 2

Analytic correspondence
